Job Description for Analyst / Sr. Analyst

- Working closely with US-based clients across US time-zones.
- Working directly with clients and FJ team members on a day-to-day basis to identify business needs, frame a solution approach, seek and obtain the data to solve the problem, run the analysis, present actionable recommendations to clients, and partner with them on implementation
- Using LLMs and other generative AI tools to solve cutting-edge business problems and redefine existing business models
- Employing a diverse set of programming methodologies in Python and SQL including data analysis and modelling, workflow systems, screen scrapers, APIs and others in order to solve business problems for FJ and clients
- Identifying information sources, understanding database structures and data dictionaries to develop the optimal approach for data extraction, validation, and combination
- Engaging in data extraction, preparation, validation, and manipulation using statistical analysis tools such as Python, R and SQL
- Conducting quantitative and qualitative analyses. This will include reviewing publications and interviewing appropriate industry experts. It may also involve developing predictive models under the supervision of a senior modeler
- Delivering clear, actionable solutions to clients' business problems and measuring their results
- Creating strong client presentations and delivering them effectively
- Developing and maintaining complex Excel and Google Sheets models (financial and other)
- Building and maintaining long-term client relationships

FJ will sponsor H1B Visa if you wish to apply for lottery that you can do once you complete 2 years in FJ.

Requirements:

- Strong programming skills (DA)
- Strong work ethic and ability and willingness to work in US hours
- Competitive attitude and commitment to achieving results
- A Bachelor's degree or higher in math, science or engineering (DA)
- Strong analytical skills and attention to detail
- Hunger to keep up with the latest trends in consulting and business space
- Strong written and oral communication skills
- High levels of motivation, professionalism, integrity and entrepreneurial spirit
- Ability to handle multiple work streams concurrently
- This position comes with a 3 years contract
- Preference will be given to candidates who can do a part-time internship during the school year
- Work hours-55-60 hours/week for full-time employees

Location: Remote

Position:

Analyst (3-4 years Bachelors in Engineering)

Sr. Analyst (5 years and above MSc/Masters/PHD/MTech etc.)

SWE Job Description:

1. Frontend Web Developer (Fluent in React.js, CSS, HTML, Figma, WebGL, Animations, Next.js, React Native, UI/UX and design)
2. Backend Web Developer (Extensive experience with Django and building REST APIs, Node.js, used multiple DB stacks, experience with AWS (EC2, S3, Lambda, RDS), and infrastructure and ERD setup, docker, DevOps)

Responsibilities:

- Design, develop, and deploy frontend/backend components and scalable software systems and APIs
- Collaborate closely with stakeholders across product, design, and ops to understand business logic and automate workflows
- Use data analytics skills to draw insights and inform decision-making
- Ensure high performance, test coverage, observability, and system reliability
- Participate in regular team meetings, code reviews and architecture discussions
- Set up and maintain CI/CD pipelines using GitHub Actions / GitLab CI etc.

Requirements:

- Fluency and extensive experience with your tech stack
- Strong problem-solving and communication skills, including the ability to effectively communicate with business stakeholders
- Familiarity with Git, CI/CD pipelines and version control
- Experience with data analytics (preferred, but not required)
- Bachelor's degree in Computer Science or a related field (preferred, but not required)
- Exposure to LLMs / NLP tools (OpenAI, HuggingFace, LangChain)
- Intellectual curiosity and a habit of proactively exploring and applying emerging technologies
- Strong sense of ownership and ability to work autonomously in a fast-paced, evolving environment
- Commitment to continuous learning, staying current with modern tools, frameworks, and industry best practices
- Results-oriented mindset with a bias toward action and measurable outcomes
- Bonus points:
    - Experience with vector search, semantic embeddings, RAG pipelines
    - Familiarity with event-driven architecture, GraphQL, or gRPC
    - Contributions to OSS, technical blogs, or developer communities
